

Page 5, first full paragraph, at lines 6-10, substitute the following paragraph:

5

B1
In FIG. 4, at block 420, the coarse altitude is used to estimate a 3-dimensional location, thus providing a derived altitude. If only a 2-
dimensional ~~dimensional~~ solution is available, the coarse altitude can be used
as the derived altitude. At block 430, a reference altitude is determined based
10 upon the estimated location, either by the receiver or by the network as
discussed above.
